

# Profile® II Filter Cartridges For Clarification and Particle Removal

Profile II filter cartridges are high efficiency depth filters designed for superior clarification and particle removal in food and beverage applications.

# **Description**

Constructed of melt blown polypropylene media, Profile II cartridges feature a fixed fiber matrix with graded pore structure, created by continuous intertwined fibers of varying diameter.

These features are the key to this filter's superior removal performance and high contaminant holding capacity. With coarsest pore sizes in the outermost layers and decreasing pore sizes towards the innermost layers of the cartridge, pre-filtration and fine filtration can occur within the same cartridge.

Profile II filter cartridges provide a removal efficiency of >99.98% at the stated micron rating in compatible liquids with highly consistent filtration performance.

Profile II Filter Cartridges

#### **Features and Benefits**

Features	Benefits
Fixed fiber matrix resulting in highly stable pore structure	<ul> <li>Superior removal efficiency</li> <li>Consistent filtrate quality</li> <li>No media migration or unloading of contaminants</li> </ul>
Continuous pore size variation, enabling pre-and fine filtration in the same cartridge	<ul> <li>High dirt holding capacity and extremely long service life</li> <li>Economical cost per filtered volume</li> <li>Lower disposal costs</li> </ul>
All polypropylene construction without adhesives, binders or surfactants	Broad chemical compatibility, suitable for use in a variety of fluids
Available in multiple configurations	Easy to integrate into existing production lines

# Quality

- Cartridges produced in a controlled environment
- Manufactured according to ISO 9001:2008 certified Quality Management System

# **Materials of Construction**

Filter Medium	Polypropylene	
Core	Polypropylene	
AB Style Cartridges only		
Cage, Fin End and End Cap	Polypropylene	
Adaptor	Polypropylene with stainless steel reinforcing ring	
O-ring Seal	Silicone Elastomer Ethylene Propylene Rubber	
RMF Style Cartridges only		
End Cap and Seal	Thermoplastic Elastomer	

# **Food Contact Compliance**

Please refer to the Pall website www.pall.com/foodandbev for a Declaration of Compliance to specific National Legislation and/or Regional Regulatory requirements for food contact use.

### **Technical Information**

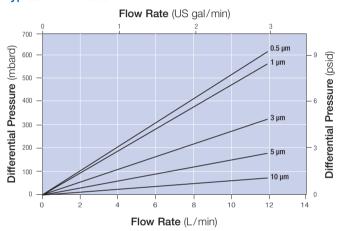

The technical information provided is based on controlled laboratory tests done on typical production filters at the conditions described, unless otherwise indicated. Actual operating conditions may affect the filter's performance.

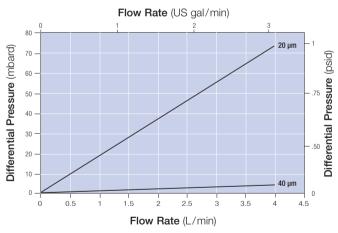

#### Operating Characteristics in Compatible Fluids<sup>1</sup>

Maximum Differential Pressure <sup>2</sup>	Operating Temperature
4 bard (60 psid)	30 °C (86 °F)
3.4 bard (50 psid)	50 °C (122 °F)
2 bard (30 psid)	70 °C (158 °F)
1 bard (15 psid)	82 °C (180 °F)
0.3 bard (5 psid) <sup>3</sup>	125 °C (257 °F)

<sup>&</sup>lt;sup>1</sup> Fluids which do not swell, soften or adversely affect any of the filter components <sup>2</sup> In forward direction. Recommended change-out differential pressure is 2.4 bard (35 psid), provided the maximum differential pressure (based on temperature) is not exceeded.

#### Typical Flow Rates<sup>4</sup>

<sup>&</sup>lt;sup>4</sup>Typical initial clean delta p per 254 mm (10 inch) cartridge, water at 20 °C (68 °F). For liquids with viscosity greater than 1 cP, multiply the delta p by the viscosity.

#### Sterilization and Sanitization<sup>5</sup>

Method	Temperature	Cumulative Time
Steam Sterilization or Autoclaving	125 °C (257 °F)	10 hours
Hot Water Sanitization	80 °C (176 °F)	

<sup>&</sup>lt;sup>5</sup> For applications requiring *in situ* sterilization or sanitization Pall recommends the use of Code 7 adaptors to ensure filter sealing after cooling. Cartridges should be cooled to system operating temperature prior to use. If RF or RMF elements are heated *in situ* and cooled by a difference of more than 20 °C (36 °F), sealing of the element may be marginal, depending on the type of sealing mechanism used in the filter housing.

## **Ordering Information**

This information is a guide to the part numbering structure and possible options. For availability of specific options and housing details, please contact Pall.

Example Part Number: **AB2Y0507WJ**See bold reference code in tables.

#### Table 1: Nominal Length

. Nomina Length		
Length	Code	Length
AB, RF and RMF Styles RF		only
254 mm (10")	01	25.4 mm (1")
508 mm (20")	05	127 mm (5")
762 mm (30")	09	228.6 mm (9")
1016 mm (40")	39	990.6 mm (39")
	Length and RMF Styles  254 mm (10") 508 mm (20") 762 mm (30")	Length         Code           and RMF Styles         RF Style           254 mm (10")         01           508 mm (20")         05           762 mm (30")         09

#### RF and RMF Styles only

29	736.6 mm	(29")

#### Table 2: Removal Rating<sup>6</sup>

C	ode	Rating (µm) @ 99.98%	Dating (um) @ 000/
AB Style	RF, RMF Style	Efficiency (β-5000)	Rating (µm) @ 90% Efficiency (ß-10)
005	005	0.5*	<0.5*
010	010	1	<0.5*
030	030	3	<1*
050	050	5	2
100	100	10	6.5
n.a.	200	20	10
n.a.	400	40	20

<sup>&</sup>lt;sup>6</sup> Profile II filter cartridge liquid retention ratings up to 20 micron are based on a modified OSU-F2 single pass test in an aqueous medium. Oil is used as the test medium for the 40 micron grade. Asterisks indicate extrapolated values.

#### Table 3: Adaptor

Code	Description
3	SOE - single open end with flat closed end and external 222 O-rings
7	SOE - single open end with fin end, 2 locking tabs and external 226 O-rings
8	SOE - single open end with fin end and external 222 O-rings
28	SOE - single open end with fin end, 3 locking tabs and external 222 O-rings

#### Table 4: O-ring Seal7

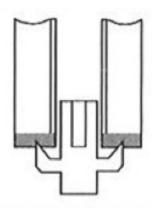

Code	Description
H4	Silicone Elastomer
J	Ethylene Propylene Rubber

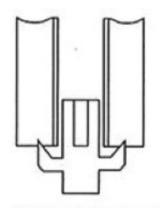

<sup>&</sup>lt;sup>7</sup> AB style configurations only

<sup>&</sup>lt;sup>3</sup> AB style only

Figure 1: Adaptor configurations for Profile II filters.

#### **AB Style**

Code 7 70 mm dia. Double o-ring seal

# **RMF Style**

63.5 mm dia. Flat gasket seal

# **RF Style**

63.5 mm dia. Knife-edge seal
